1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime

end enriched, double-strand cDNA was digested with Not I and cloned

into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library

was normalized. Library was constructed by Life Technologies, a

division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     On Feb 15, 2001 this sequence version replaced Contact: Genoscope

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalla; Eutheria; Primates; Catarrhini; Hominidae; Homo.

Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       BX373611

NCI_CGAP FHO is a cDNA library containing the following tissue(s): Human Grade 1 Chondrosarcoma Cell Line The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGAATCCGGC. The cell line was provided by Dr James Martin from University of Iowa

The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, restenosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma immunodetection and diagnosis of micrometastases, and original inheparin, and anti-heparanase antibodies may be applied for renal failure in biopsy specimens, plasma samples, and body fluids. The present sequence encodes human heparanase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1721 BP; 451 A; 413 C; 410 G; 447

                                                                                                                                                                                                                                                               The present invention describes genetically modified cells (A) containing a polynucleotide (I) that encodes a polypeptide with heparanase activity, and express recombinant heparanase (II). Heparanase cleaves heparan sulphate (HS) at specific intrachain sites, resulting in release of heparin-binding growth factors, enzymes and proteins that are sequestered by HS in basement membranes, extracellular matrix or cell surfaces. It may also be implicated in tumour angiogenesis and metastases. (II) is potentially useful in wound healing and for treating angiogenesis; restenosis, atheroselerosis, inflammation, neurodegeneration, viral infection and cystic fibrosis. It can also be used to neutralise heparin (an alternative to protamine) and to screen for specific inhibitors (potentially useful for treating cancer and metastases). Antibodids ralsed against (II) are used for immunodetection and diagnosis of micrometastases, autoimmune lesions and kidney failure. (A) provide (II) in large quantities, in a form that is homogeneously processed and activated homotralised by a dedicated protease. The present sequence

                                                                                                                                                                                                                                                                                                                 CC The present sequence encodes a human protein with heparanase catalytic CC activity. The heparanase (hpa) polynucleotide is useful in gene therapy, CC particularly in treating tunour, inflammation or autoimmunity. CC Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to CC particularly. The polynucleotide is useful in modulating the responses to CC interleukin (II)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa CC infections, or disintegration of neurodegenerative plaques. The CC polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-CC Straussler Syndrome or Creutzfeldt-Jakob disease), and some viral, or bacterial or protozoa infections
                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                            The present invention describes heparanase-specific molecular probes, cuseful for methods of detecting heparanase in situ. The probes and anti-
heparanase antibodies are used to detect or quantify the expression of heparanase, for diagnosis and monitoring of diseases (especially metastasis), for treatment of heparanase-associated diseases (e.g. tumours, (adeno)carcinoma, squamous cell carcinoma, teratocarcinoma, metastases) derived from liver, prostate, bladder, breast, ovary, cervix, colon, skin, intestine, stomach, uterus and panoreas, kidney disease, diabetes and inflammation, haemorrhagic nephritis, nephrotic syndrome, sepsis and inflammatory or autoimmune disease), for targeted drug delivery (e.g. of anticancer agents) and as research reagents. The present sequence encodes human heparanase, which is used in the
                                                                                                  Query Match

The invention relates to heparanase DNA and protein sequences. The heparanase DNA and protein sequences are useful i wound healing, angiogenesis, restenosis, atherosclerosis, inflammation, pulmonary disease, neurodegenerative diseases (such as Scrape, Alzheimer's disease, and Creutzfeldt-Jakob diseases) or viral infections. The heparanase coding sequence is particularly useful in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1721 BP; 451 A; 413 C; 410 G; 447
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    heparanase, useful in wound healing, as well as in gene therapy protocols for angiogenesis, restenosis, atherosclerosis, or inflammation.

The invention is used to induce or accelerate a healing process, particularly of an ulcer, burn, laceration, surgical incision, necrosis, pressure wound, diabetic ulcer and to induce or accelerate angiogenesis. The present sequence is human hpa cDNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to methods and compositions for inducing and/or accelerating wound healing via the catalytic activity of heparanase. The invention is used to induce or accelerate a healing process, particularly of an ulcer, burn, laceration, surgical incision, necrosis, pressure wound, diabetic ulcer and to induce or accelerate angiogenesis. The present sequence is human hpa cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1721 BP; 451 A; 413 C; 410 G; 447

CC polynucleotide or a polynucleotide analogue of at least 10 bases being comprising a comprisite and in vivo, under physiological conditions, with a portion of catalytic activity. Also included are a method of in vivo downregulating conditions and in vivo catalytic activity. Also included are a method of in vivo downregulating conditions and in vivo downregulating conditions and in vivo downregulating conficted by heparanase activity, comprising administering the ASO in vivo), a method conficted by heparanase activity, comprising administering and an antisense nucleic acid construct (comprising a promoter conficted by heparanase activity, comprising administering the ASO and a carrier, an antisense nucleic acid construct (comprising a promoter condered by heparanase activity, comprising a promoter condered by sequence of at least 10 bases being hybridisable in vivo, condered by forming and conditions, with a polynucleotide strand encoding a conditions of a construct (comprising a method of in vivo comprising the antisense nucleic acid construct), a pharmaceutical composition comprising the antisense nucleic acid construct (comprising a method of in vivo comprising the antisense nucleic acid construct and a carrier, and an analogue of at least 10 bases being hybridisable in vivo the comprising the antisense nucleic acid construct and a carrier, and an analogue of at least 10 bases being hybridisable in vivo, under construct to a polynucleotide strand being construct and a carrier, and an analogue of at least 10 bases being hybridisable in vivo, under construct of a polynucleotide strand being construct and a carrier, and an analogue of at least 10 bases being hybridisable in vivo, under construct and a carrier, and an analogue of at least 10 bases being hybridisable in vivo, under construct of a polynucleotide strand being construct and a carrier, and an analogue of a least 10 bases being hybridisable in vivo, under construct of the construct o

                                                                  The present invention relates to a transgenic non-human animal whose genome comprises an exogenous polynucleotide sequence, including a promoter active in tissues of the non-human, a region encoding a human heparanase, where the promoter and the region encoding human heparanase is expressed in at least a portion of the cells of the non-human animal. The methods and compositions of the present invention are useful for the production of transgenic animals expressing heparanase, the used as models for human diseases such as cancers, viral infection, restenosis, neurodegenerative diseases, atherosclerosis and pulmonary disorders. The present sequence is human hpa cDNA used in the exemplification of the invention.

                                                                                                                                                                                         The present invention relates to a transgenic non-human animal whose genome comprises an exogenous polynuclectide sequence, including a promoter active in tissues of the non-human, a region encoding a human are operably linked in the exogenous polynucleotide such that human are operably linked in the exogenous polynucleotide such that human human animal. The methods and compositions of the cells of the non-useful for the production of transgenic animals expressing heparanase, the used as models for human diseases such as cancers, viral infection, restenosis, neurodegenerative diseases such as cancers, viral infection, disorders. The present sequence is human hpa cDNA used in the exemplification of the invention.
                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                  New transgenic non-human animal expressing heparinase, useful as modeler for human disease, such as cancers, viral infection, neurodegenerative diseases, restenosis, atherosclerosis and pulmonary disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                31-AUG-1998;

The specification describes a polypeptide having heparanase (hpa) activity. The recombinant protein is used as a modulator of heparin-binding growth factors cellular responses to heparin-binding growth factors and cytckines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disinteraction of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, restenosis, athersclerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, antoimmune lesions, ar renal failure in biopsy specimens, plasma samples, and body fluids. The heparanase (hpa) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bFGF) and cytokines (e.g. interleukin (IL)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Straussler Syndrome or Creutzfeldt-Jakob disease), and some viral,

                                                                       The present invention relates to methods and compositions for inducing and/or accelerating wound healing via the catalytic activity of heparanase. The invention is used to induce or accelerate a healing process, particularly of an ulcer, burn, laceration, surgical incision necrosis, pressure wound, diabetic ulcer and to induce or accelerate angiogenesis. The present sequence is human SK-hepl cDNA.
                                                    Sequence 1899

                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to methods and compositions for inducing and/or accelerating wound healing via the catalytic activity of heparanase. The invention is used to induce or accelerate a healing process, particularly of an ulcer, burn, laceration, surgical incision, necrosis, pressure wound, diabetic ulcer and to induce or accelerate angiogenesis. The present sequence is human SK-hepl cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (ILAN/)
